Experiment - 14

Create a Virtual Hard Disk and Allocate Storage Using VMware Workstation

Aim

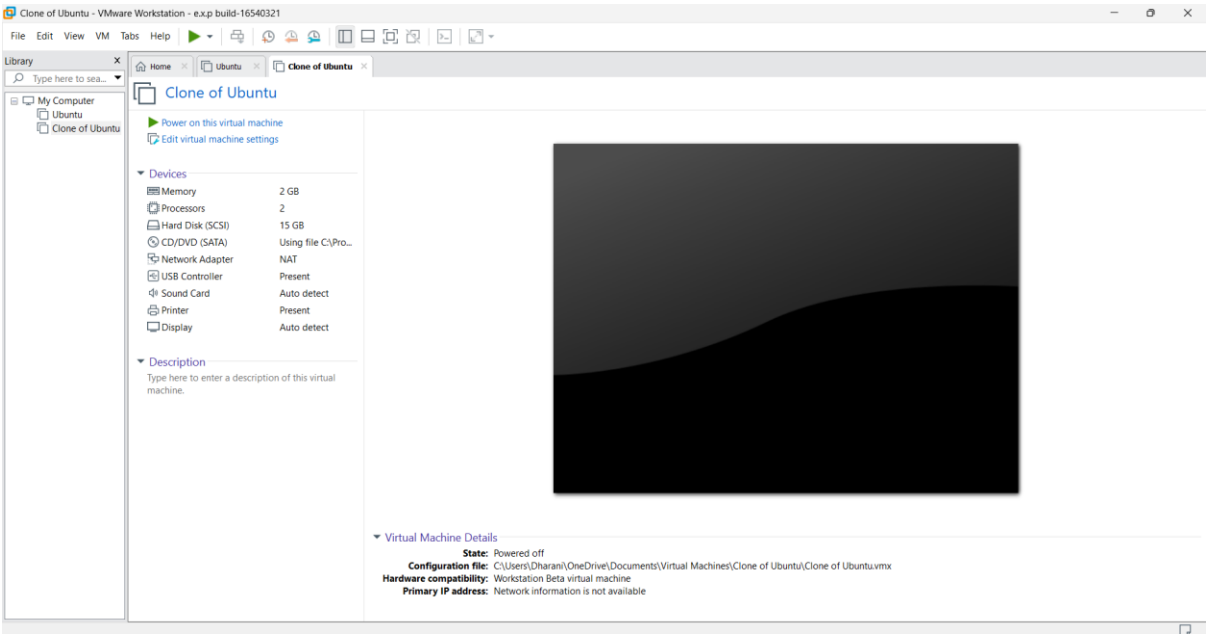

To create a Virtual Hard Disk (VHD) and allocate storage to a virtual machine using VMware Workstation, demonstrating virtual storage management.

Procedure

1. Start the computer and open VMware Workstation.
2. Select an existing virtual machine or create a new virtual machine.
3. Open the virtual machine settings.
4. Click Add Hardware.
5. Select Hard Disk and click Next.
6. Choose the compatible virtual disk type, such as SCSI, and click Next.
7. Select Create a new virtual disk.
8. Enter the required virtual disk capacity, for example, 15 GB.
9. Choose Store virtual disk as a single file or Split virtual disk into multiple files, depending on your requirement.
10. Click Next and provide a name and location for the virtual disk file.
11. Click Finish to create the virtual hard disk.
12. Verify that the new hard disk appears in the virtual machine settings.
13. Start the virtual machine and check whether the guest operating system detects the new disk.
14. If necessary, initialize and partition the disk within the guest operating system before using it for file storage.

Implementation

Output:

Result

Thus, a virtual hard disk was successfully created and allocated to a virtual machine using VMware Workstation, demonstrating virtual storage allocation and management.
